

BR930

Switch
Simple
ITEM: 030701

- BR930 Switch from 911 Signal is a compact three button switch box that gives users the ability to control and power multiple lights from one single unit.
- This mini switch box is incredibly user friendly. White labels on a black box make it easy for controllers to read the switch box, even while driving.
- A backlight built into the switch box allows controllers to see whether their lights, including dash lights, vehicle lightbars, sirens, warning lights, and a variety of others, are on or off with a simple glance. Users can also switch flash patterns or siren patterns with a simple push of a button.
